

First workshop on:

BONE MARROW TRANSPLANTATION IN THALASSEMIA

27/31 March 2006

The workshop is directed to participants who wish to improve their knowledge in fields related to bone marrow transplantation in Thalassemia. The following topics will be covered in the workshop:

- **Immunogenetics – HLA TYPING**
- **Marrow engraftment after BMT**
- **Genetic of Thalassemias**
- **Hemopoietic Stem Cell**
- **Bone Marrow Transplantation**
- **Graft versus Host Disease**
- **Infections**
- **The ex-thalassemic after transplant**
- **IME International Project**

Policlinico Tor Vergata

Viale Oxford 81 – Torre 6, Piano 9 - 00133 Roma, Italy

**MIH Foundation – Mediterranean Institute of Hematology
International Center for Transplantation in Thalassemia
and Sickle Cell Anemia**

Director, Prof. Guido Lucarelli

OBJECTIVES

- Improve scientific knowledge and methodology in Immunogenetics.
- Focus on the correct clinical processes related to bone marrow transplantation in Thalassemia.
- Discuss the complications related to bone marrow transplantation, such as graft rejection, graft versus host disease and infections
- Identify organizational processes to determine the best quality approach to different clinical cases

The workshop will feature experts reviewing the topics and giving lectures in the various sessions.

Participants will also have the opportunity to meet experts in the different scientific areas and receive a more detailed update on the methods and the techniques used in different fields.

An end-of-workshop assessment will be given to participants based on interactive methods.
